Questions and Answers

Question: Does each site have a conduit?

Answer: Yes, from the utility poles to the outside wall of each building except EST which is a direct drop form the pole.

Question: Is BPS interested in a redundant fiber loop, both north and shouth sides of the city?

Answer: If it is an option, yes.

Question: Does the district have failover internet service or plans to do so?

Answer: We currently don't but if the WAN fiber is redundant, it may be a consideration.

Question: How many strands of fiber do you want at each site.
Answer: Ideally strands would be useful for failover.

Question: Regarding the invoicing section: we understand SPI (Form 474) is the default method. Would the applicant be open to electing the BEAR (Form 472) method for FRNs resulting from this RFP, or is SPI required? Will a vendor's willingness to support either method be considered in bid evaluation?
Answer: SPI (Form 474) is the preferred invoicing method. However, applicants may elect to use the BEAR (Form 472) reimbursement method if preferred. A vendor's ability to support either invoicing method will not be considered as a factor in bid evaluation.
