Round Rock Independent School District

Addendum for Standalone Data Transmission Service

FCC Form 470 270003062 | Funding Year 2027

Addendum 1 November 11, 2026

This addendum answers vendor questions and extends the bidding schedule. Upon issuance, it becomes part of this solicitation and controls any conflicting provision on the subjects addressed below. All other solicitation requirements remain in effect.

Revised bidding schedule

In response to requests for additional preparation time, including vendors request for up to two additional weeks and the Thanksgiving scheduling concern, the District extends the schedule for all prospective respondents as follows:

- **Questions due Monday, December 7, 2026, at 4:00 p.m. Central Time.**
- **Proposals due Monday, December 14, 2026, at 4:00 p.m. Central Time.**

These dates supersede earlier question and proposal deadlines for this solicitation. Submit questions and proposals through the process stated in the RFP. Any further schedule change will be published for all respondents. Previously submitted proposals may be revised or withdrawn before the revised deadline using that same process.

Bandwidth pricing and future upgrades

Question: Does the District need pricing for 10 through 100 Gbps or only the ability to upgrade later?

Response: The listed 10 Gbps, two 10 Gbps circuits (2 x 10 Gbps), 40 Gbps and 100 Gbps capacities represent initial service and growth options for the route alternatives in the RFP. Pricing will help determine the starting capacity. Provide pricing for capacities available to be offered and describe the ability to grow to the other listed capacities. Disclose any unavailable capacity or route, or any option requiring further engineering.

Identify nonrecurring, monthly recurring and other required charges for each priced option. Distinguish firm pricing from budget estimates or options subject to engineering. Where higher-capacity pricing is not yet available, describe the limitation and the design work, equipment, interfaces, construction, approvals and lead time needed. Do not leave options blank without explanation. Describe the arrangement and any shared facilities for 2 x 10 Gbps. Future upgrades and purchase of every option are not guaranteed.

District fiber from Westwood to the Primary Data Center

Question: If a provider delivers service to Westwood High School, must the provider also extend the connection to the Primary Data Center?

Response: No. For a proposal using the Westwood delivery option, the provider must deliver the requested service to the agreed demarcation at Westwood High School, 12400 Mellow Meadow Drive, Austin, TX 78750. RRISD will handle the onward fiber path from Westwood to the Technology Center, also referred to as the Primary Data Center or PDC, on RRISD fiber. Do not include construction, lease or maintenance of that District fiber path in the provider's required transport price.

The District's intended onward path is Westwood to McNeil to Cedar Ridge to Stony Point to Round Rock to the PDC. RRISD intends to avoid the Kelly Reeves Secondary Data Center on that path. Identify the provider handoff interface, optics and power or space requirements at Westwood, and disclose any dependencies on District facilities. This clarification does not promise that a provider's route or the full connection has been verified as diverse; the RFP's resiliency requirements continue to apply to the proposed provider service.

LEARN connection at the University of Texas

Question: The address 124 Inner Campus Drive is on the UT campus, while the applicant is Round Rock ISD. Is the address correct?

Response: Yes. Round Rock ISD is the applicant and purchaser of the requested transport. The University of Texas location is a remote handoff for connection to LEARN service, rather than a District campus. The designated handoff is NOCB West University DC, 124 Inner Campus Drive, COM Building, Room 10, Austin, TX 78712.

The other remote handoff alternative remains Data Foundry, 4100 Smith School Road, TX1, Building One, Austin, TX 78744. The District endpoint alternatives remain the Technology Center, 7700 Cornerwood Drive, Austin, TX 78717, and Westwood High School, 12400 Mellow Meadow Drive, Austin, TX 78750. The four route combinations in the RFP remain unchanged.

Provider hub and UT campus distribution

Question: A provider can hand off at its UT hub, with UT distributing the circuit to the designated building. Does that satisfy the requested service?

Response: The required transport must reach the designated LEARN handoff identified in the RFP. A provider-hub handoff alone does not establish completion to that demarcation. A proposal using UT campus distribution must describe the complete path from the District endpoint to the designated handoff and identify each party's responsibilities.

Identify the provider hub, proposed interface and bandwidth, campus distribution segment, required cross-connects, third-party arrangements, approvals and lead times. Include required cross-connect charges in accordance with the RFP and separately identify all associated nonrecurring and recurring costs, including any third-party charges. Do not assume that UT distribution or another party's connection is available without charge.

Disclose any segment or approval that remains unconfirmed and any required work or payment expected from RRISD. The District has not committed in this response to furnish a UT campus distribution segment. RRISD will provide the LOA/CFA for its Internet port as stated in the RFP; that document does not establish that intermediate campus transport is included. Any proposed alternate handoff must be expressly identified for District review under the RFP's existing alternative-location provision.

This procurement remains standalone data transmission to the LEARN handoff. Internet access service is not included in this transport request. Existing route diversity and resiliency requirements remain applicable.

Acknowledgment

Identify this addendum by its assigned number and issue date in the proposal. Evaluation criteria, service commencement and contract terms remain as published, except as expressly modified by an issued addendum.
